

01 Creation, faculty recommendation & approval

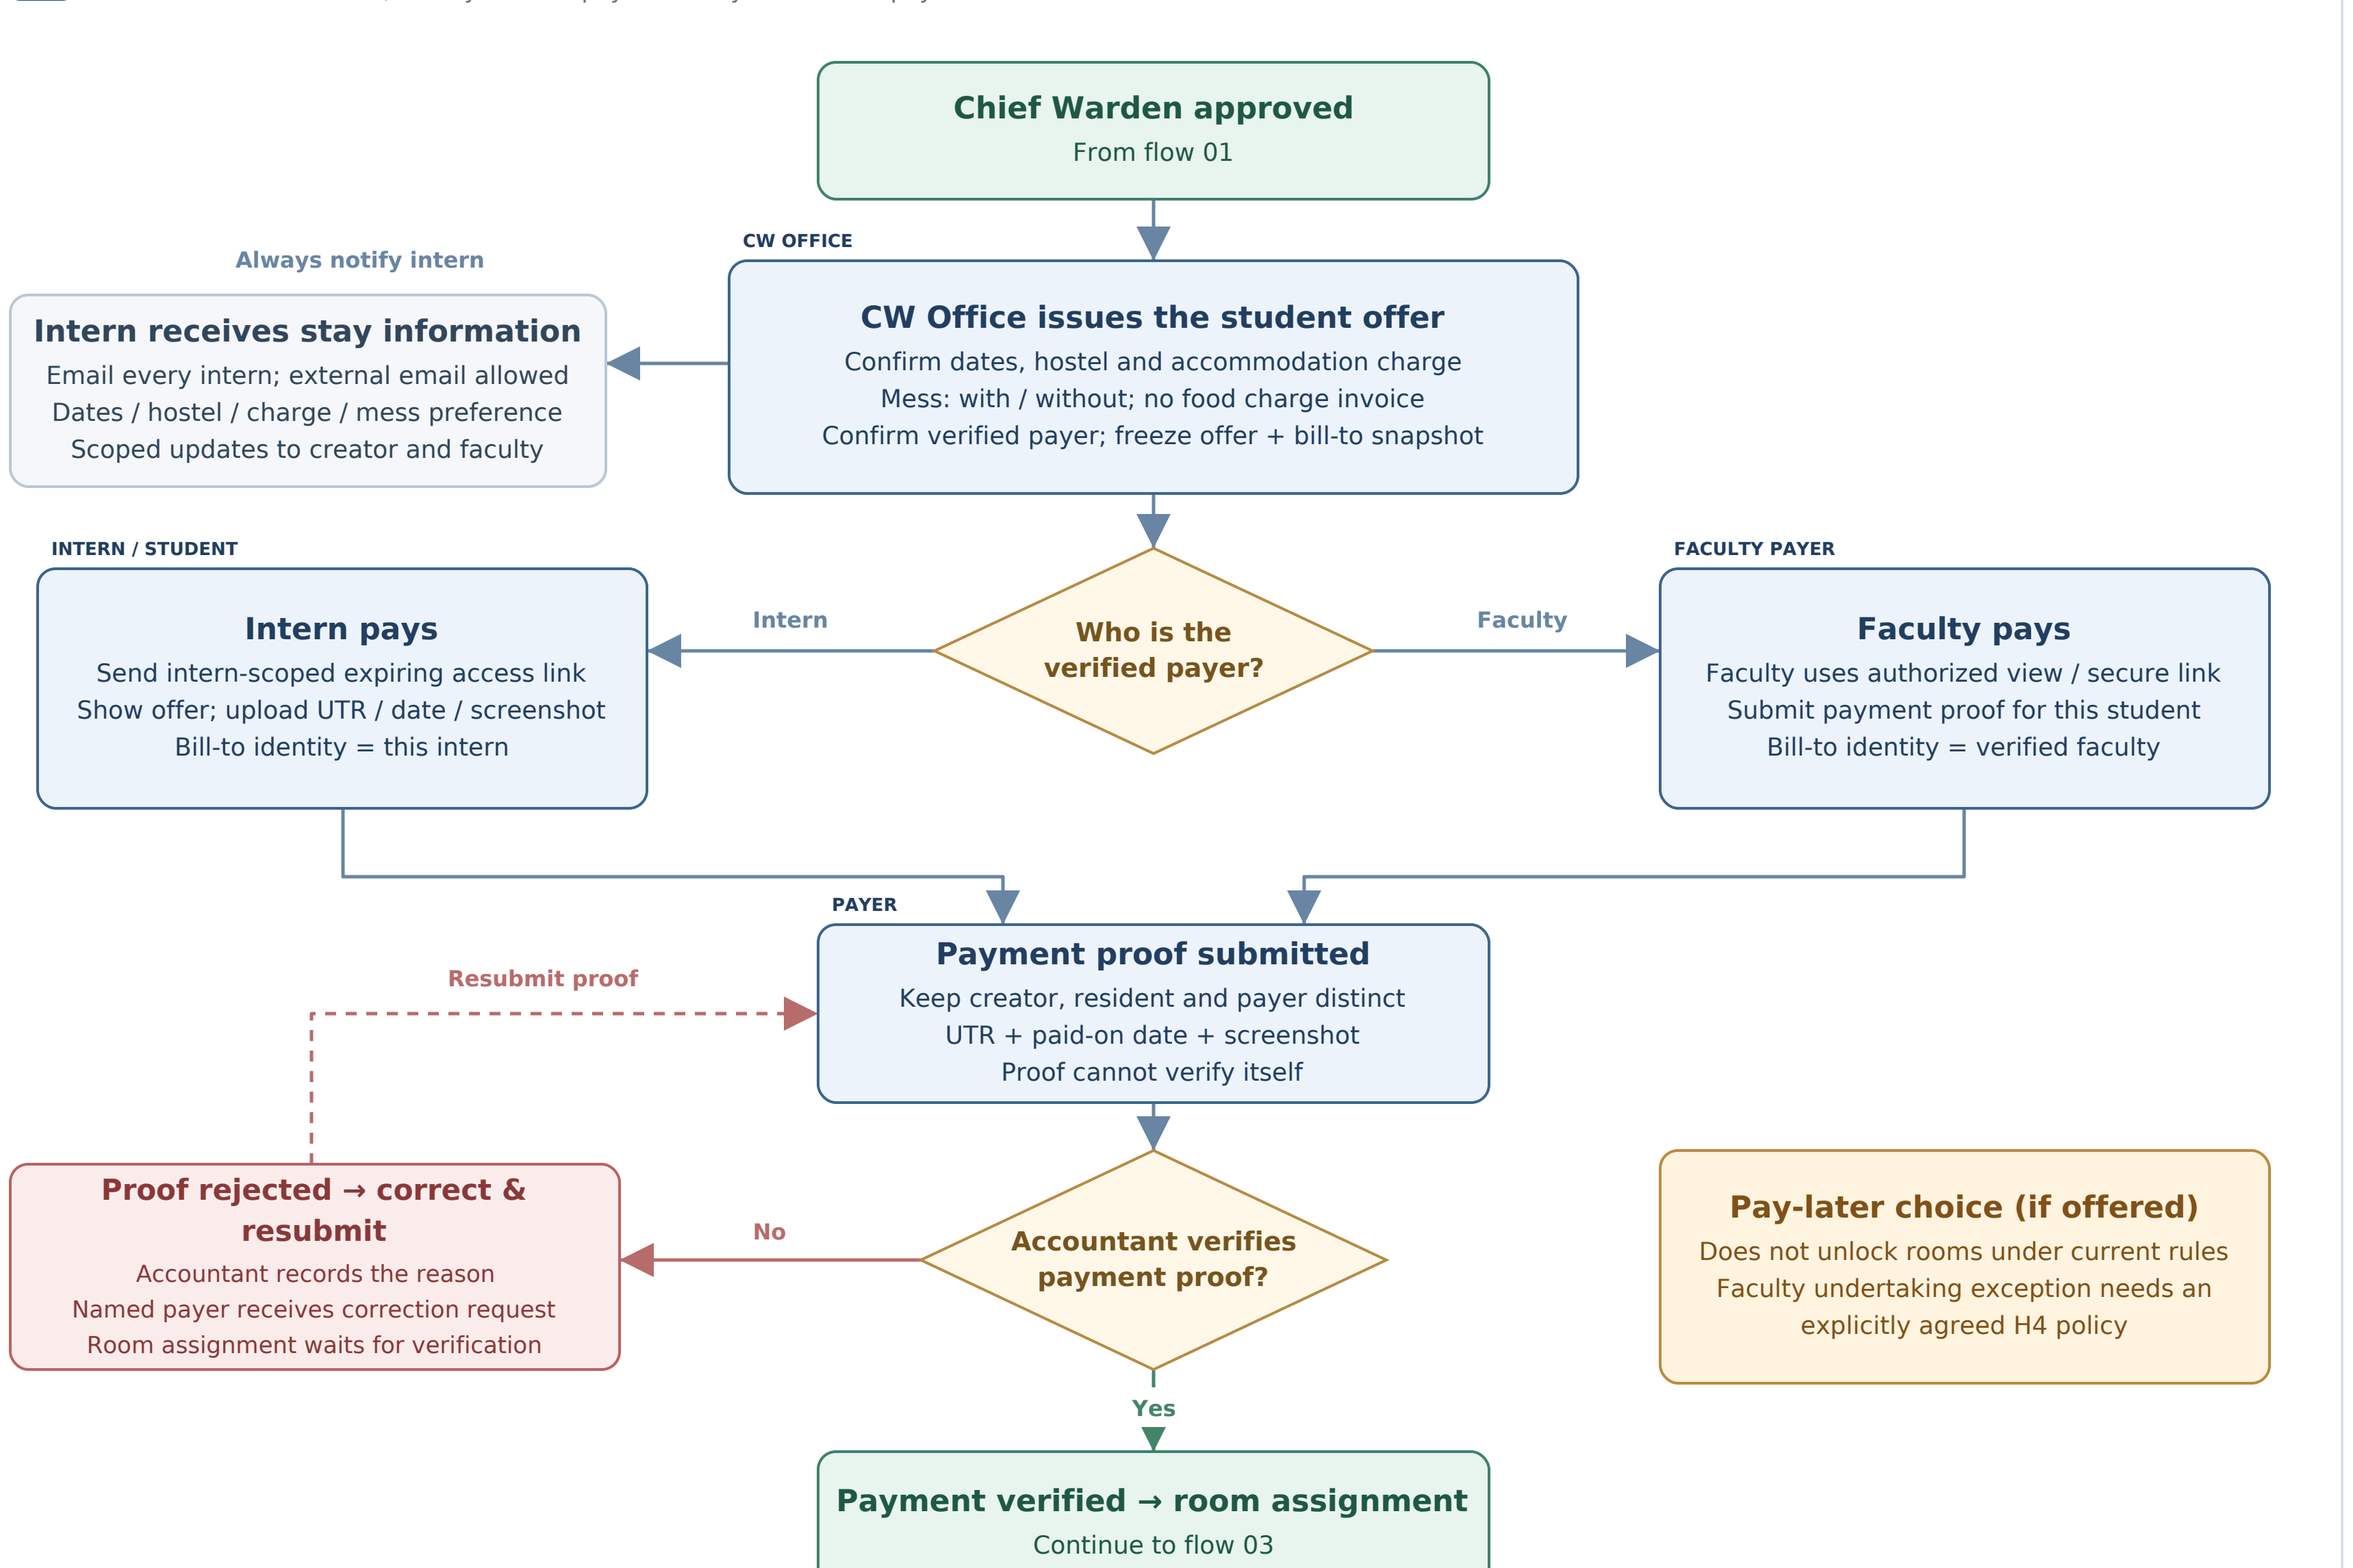

Confirmed: IIT requester/faculty email · external intern email allowed · no extra HoD approval

All Academics users are eligible. Only the selected faculty recommends. Group rows by student / creator / faculty / batch.

02 Offer, payer access & payment verification

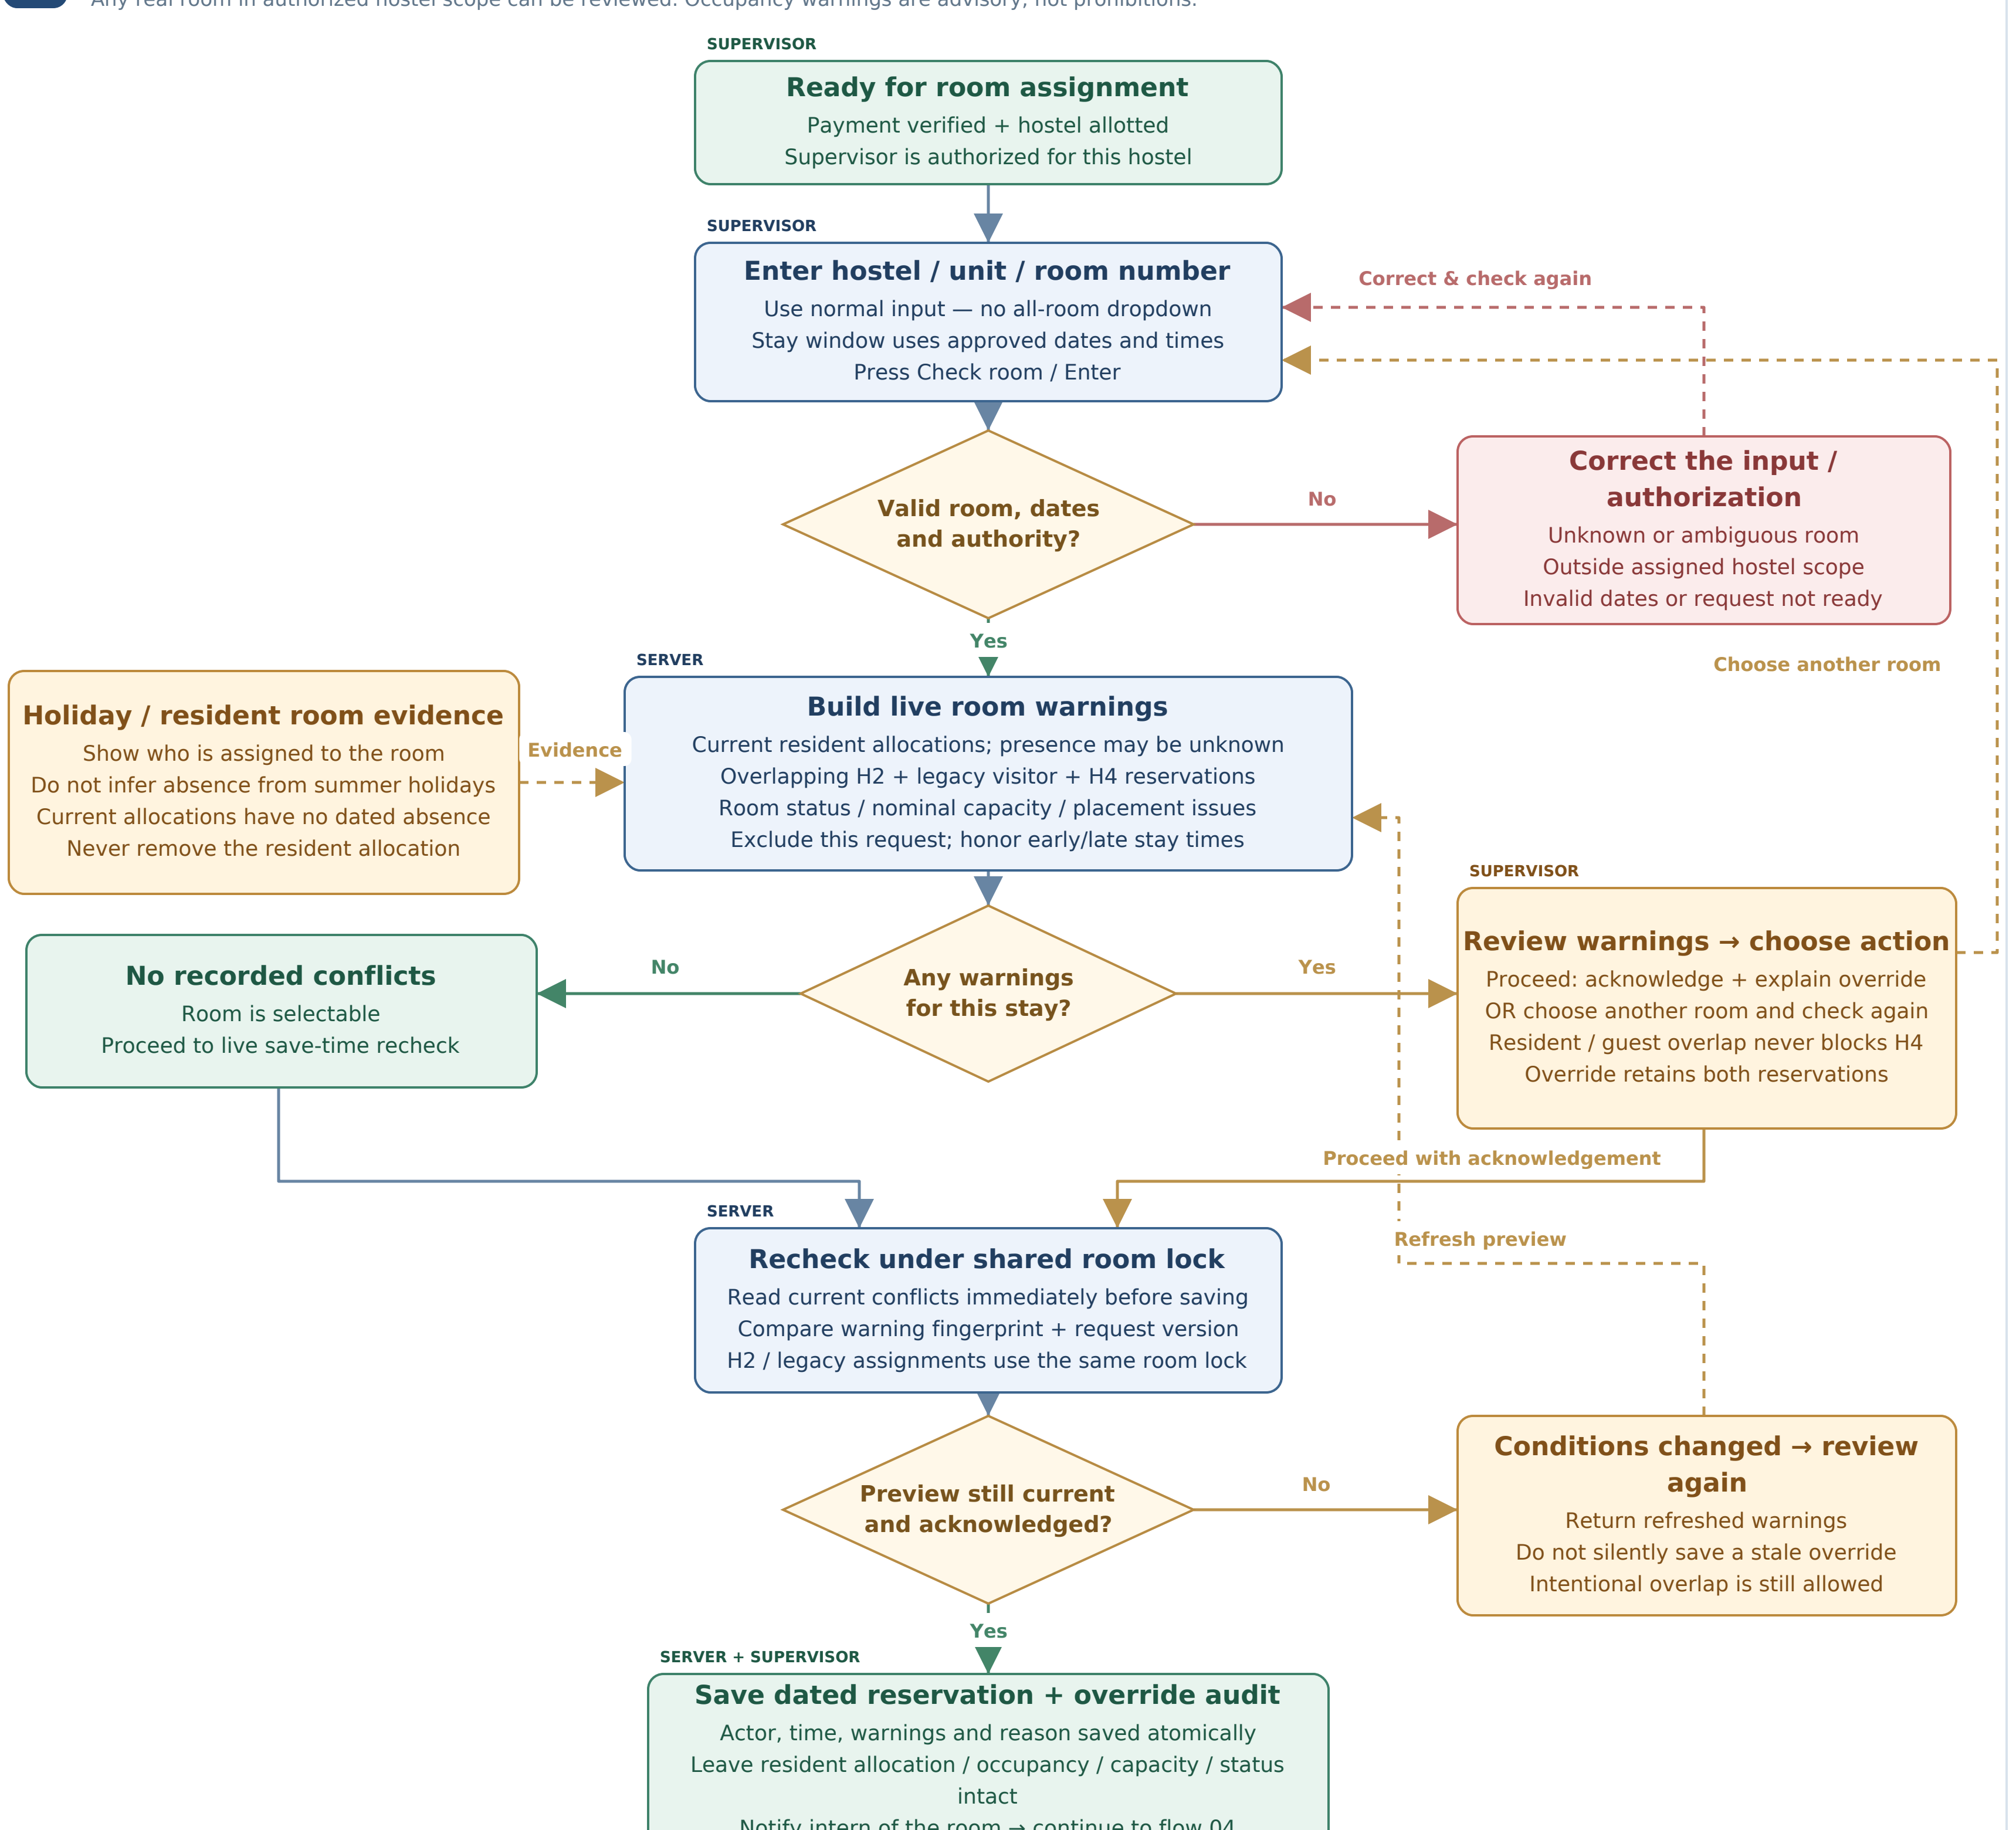

CW Office sets the offer; faculty-verified payer identity travels into payment and the invoice

One student = one bill in version one. A shared faculty transfer needs an allocation ledger; never credit it in full to every child.

03 Typed room assignment & live warning overrides

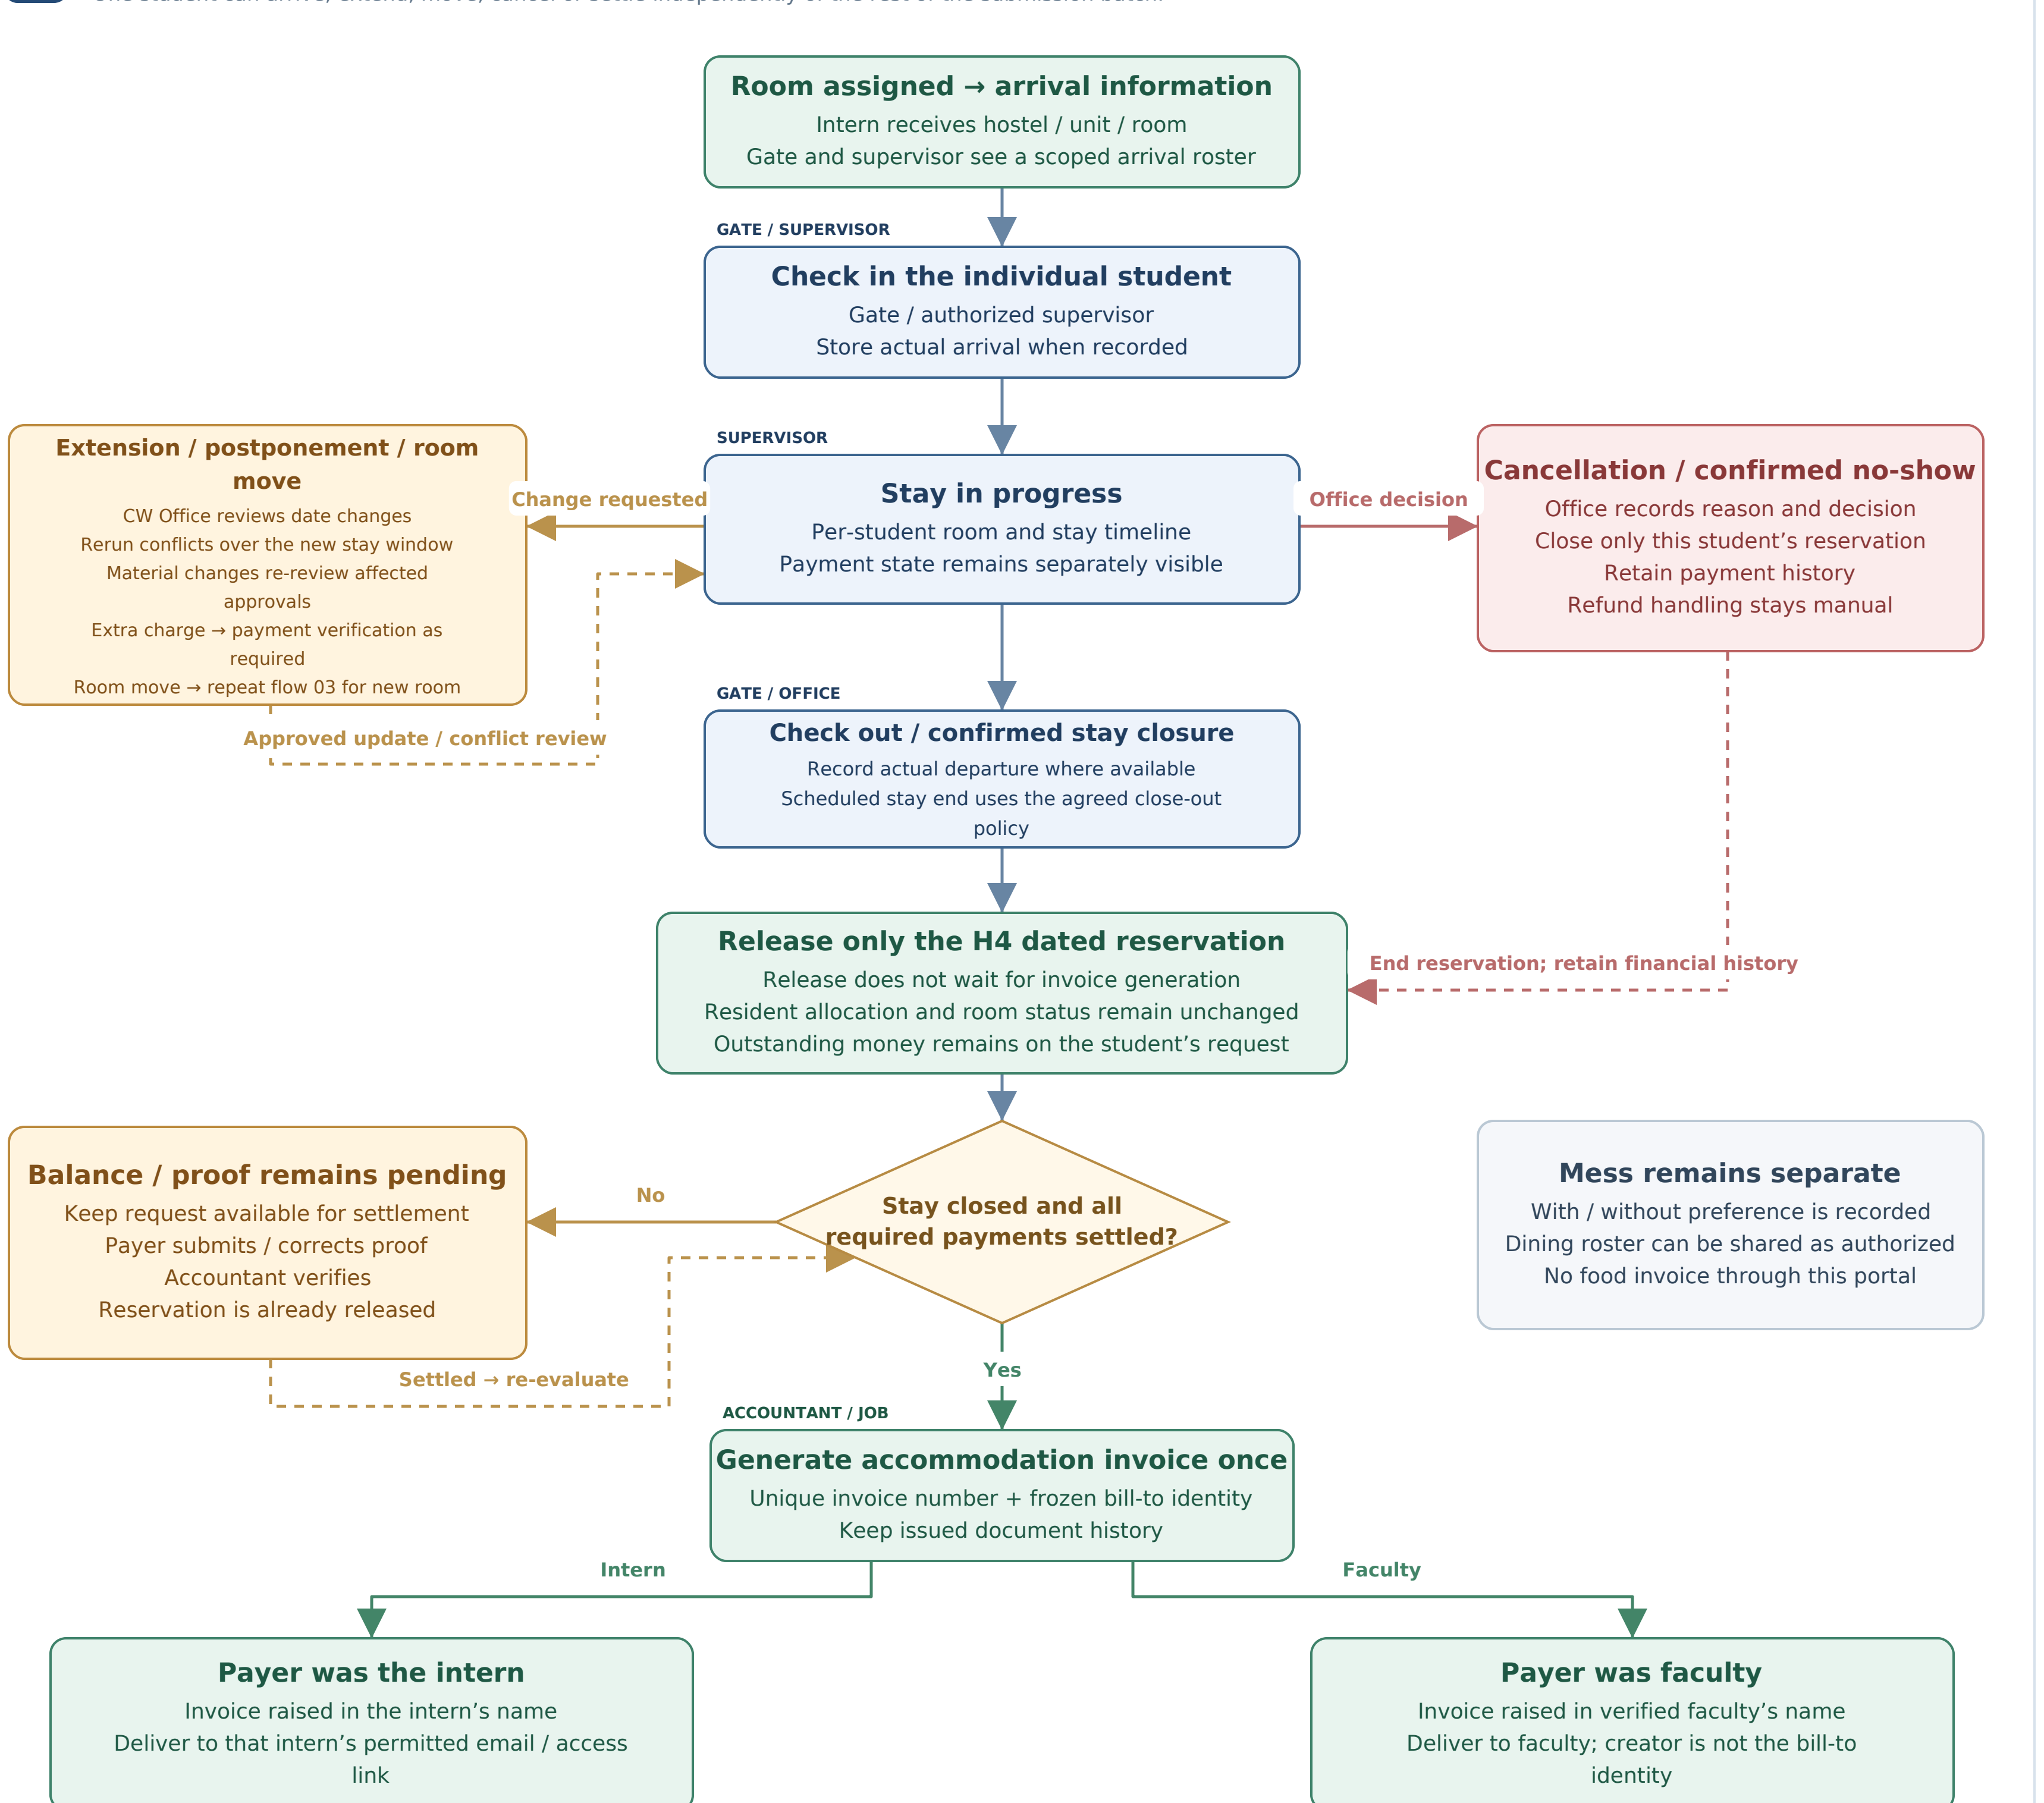

Any real room in authorized hostel scope can be reviewed. Occupancy warnings are advisory, not prohibitions.

Normal H2/legacy guest booking remains restrictive and checks H4 reservations. H4 never flips a resident room to Guest or reactivates it.

04 Arrival, stay changes, close-out & payer invoice

One student can arrive, extend, move, cancel or settle independently of the rest of the submission batch.

Invoice recipient is the verified payer. Cancellation never claims an automatic refund. Payment history remains accessible after the stay ends.
